

Stratus Business Intelligence

Stratus by Sirrus Solutions allows users to organize, view, and share both pre-packaged, and ad-hoc reports in an easy to use, full-featured application. Stratus includes a data warehouse, analysis database, and set of standard reports for several commonly used Oil and Gas industry applications. Pre-configuration allows your organization to deploy a ready-made Business Intelligence solution in a fraction of the time taken by standard approaches.

User Experience

Stratus is an application built to enable end users to easily analyze business performance information. The user interface gives straightforward access to all available reports and data but also allows the user to tune it to their particular areas of interest.

Features

- Powerful integration with Microsoft Excel.
- Report viewer which provides a high quality and interactive view of Microsoft Reporting Services reports, and allows export to various third party formats.
- Analyzer viewer provides an intuitive means for ad-hoc analysis of large amounts of corporate information using the industry leading Microsoft Analysis Services.
- Allows users to create powerful data analyzers and share them with their colleagues.
- View data by numbers, graphically through charts and graphs, or both.

- Drill through capability allows users to get to the underlying data, to see what's really going on.
- Ability to search the available catalogue of reports and analyzers by keyword.
- Integrated user and data source administration.
- Report subscription management, which allows you to get reports sent directly to your inbox.
- Use pre-built data cubes as a data source for other applications in your organization.

Stratus Connector for Spira Data

The **Stratus** Connector for Spira provides a complete data warehouse and analysis package for Spira Data - an industry leading electronic field ticketing system for Oil and Gas service companies. Included is a standard reports set and analysis database that lets you leverage the information in Spira into valuable operational insight.

Stratus Connector for P2 Energy Solutions' QByte FM

The **Stratus** Connector for QByte FM includes a data warehouse, standard reports package, and analysis database. As a complete packaged analysis solution for QByte, you can be up and running fast based on years of industry experience extracting and analyzing data from QByte.

Industry Standard Technologies

The **Stratus** Business Intelligence system is built on industry standard, best of breed technologies, including the Microsoft .NET Framework, Microsoft Office System, and SQL Server 2005, so you'll never have to worry about being locked into a proprietary platform.

Hassle-free Installation

Unlike other Business Intelligence products, **Stratus** has been designed to be installed in your Enterprise in days not months. With connectors for industry standard software, **Stratus** can be running with your data, in your environment, extremely quickly. This means a lower cost of ownership, and you can be making better business decisions tomorrow, not next quarter.

Test Drive Stratus

Contact SIRRUS today for a demonstration and trial of the **Stratus** Business Intelligence Suite. Working together with our team, we'll guide you through a structured evaluation process for using **Stratus** in your organization. Our trial covers setup, training and uses real data from your organization to ensure you get the most from your Business Intelligence investment. Try **Stratus** and you'll be convinced it the most cost effective and powerful Analytics package in the market today.
