

Business Intelligence

BUSINESS INTELLIGENCE FROM SIRRUS

Business Intelligence (BI) turns data into information. By aggregating, organizing and analyzing the right data, users can gain the insights needed to manage the performance of your organization. The benefits of Business Intelligence include:

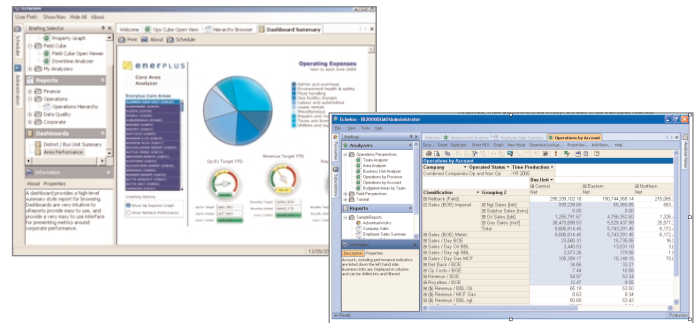

- Gaining awareness not previously possible through better data presentation
- Empowering users with flexible tools to navigate corporate information
- Enriching knowledge and clarity of corporate standards through a common semantic layer
- Achieving excellence in operations by understanding performance

MICROSOFT FOCUS

Using the industry leading Microsoft® SQL Server™ suite of products for Business Intelligence, SIRRUS crafts the solutions that are right for your business. With Microsoft® SQL Server™, organizations have an affordable and complete option for robust Business Intelligence and analytical applications:

- **Reporting Services:** For traditional style reports to insightful summary dashboards. Provides a complete solution for end-to-end reporting management.
- **Analysis Services:** For creation of Multi-dimensional data cubes that provide maximum flexibility and data access to end-users.
- **Data Transformation Services (DTS):** To consolidate, move and cleans enterprise data.
- **SQL Server:** An excellent environment for Data Warehousing and data integration.

As the most widely adopted of all platforms, Microsoft's Business Intelligence suite is a sound investment. Our expertise in using these industry leading tools will ensure you a high return on your investment.

USER EXPERIENCE

Our solutions are built with a concentration on interaction. Sophisticated users demand the power and flexibility of ad-hoc information tools. At the same time, basic and static reporting fulfills an important role for non-power users who need information in a formatted, clearly presented way.

Our interfaces combine both these aspects and leverage the Power of Microsoft® Office™, an environment users are already familiar with. Depending on your needs, SIRRUS can provide a Windows desktop interface or a pure web-based client. By leveraging Windows SharePoint™ portal, our Business Intelligence solutions can be incorporated into an Intranet experience. SharePoint™, allows your workers to collaborate, share and communicate through an easy to use web-based interface.

BUSINESS FOCUS

Technology is only a tool. The value comes from applying the tools to the opportunity. That's why SIRRUS brings a results-driven approach to consulting. We're interested in deliverables to ensure you get the return on investment you're looking for. At SIRRUS, we begin and end with a focus on your business.
